WHEAT: The outlook for 2023/24 U.S. wheat this month is for larger supplies, unchanged domestic use and exports, and higher stocks. Supplies are raised as all wheat production is projected at 1,665 million bushels, up 6 million from last month on higher Hard Red Winter production more than offsetting reductions in Soft Red Winter and White Winter. The all wheat yield is 44.9 bushels per acre, up 0.2 bushels from last month but remaining below last year. Total use is unchanged with all of the production increase added to ending stocks, now projected at 562 million bushels. The 2023/24 season-average farm price is lowered \$0.30 per bushel to \$7.70 on larger U.S. and foreign wheat supplies.

The global wheat outlook for 2023/24 is for larger supplies, higher consumption, increased trade, and larger stocks. Supplies are projected to increase 10.8 million tons to 1,066.9 million, primarily on larger production for Russia, India, the EU, and Ukraine. Russia is raised 3.5 million tons to 85.0 million, all for winter wheat, on generally favorable conditions after abundant spring precipitation. India is increased 3.5 million tons to 113.5 million, mainly on the government's third Advanced Estimate. The EU is raised 1.5 million tons to 140.5 million on continued favorable winter wheat conditions for most of the EU member countries. Ukraine is increased 1.0 million tons to 17.5 million on favorable weather conditions in southern Ukraine but production remains below last year on reduced harvested area.

Global consumption is increased 4.4 million tons to 796.1 million, mainly on higher feed and residual use for China, Russia, and India. The heavy rains in China's Henan province during winter wheat harvest is expected to result in larger supplies of feed-quality wheat as China's feed and residual is raised 2.0 million tons to 34.0 million. World trade is raised 2.9 million tons to 212.6 million, on increased exports by Russia, the EU, India, and Ukraine. Projected 2023/24 global ending stocks are raised 6.4 million tons to 270.7 million, largely on increases for India, Russia, and the EU.

COARSE GRAINS: The 2023/24 U.S. corn outlook is little changed from last month with increases to both beginning and ending stocks. Corn area and yield forecasts are unchanged. USDA will release its Acreage report on June 30, which will provide survey-based indications of planted and harvested area. Beginning stocks are up 35 million bushels reflecting a forecast decline in exports for 2022/23 that is partly offset by lower imports. Exports are lowered 50 million bushels, based on reported U.S. Census Bureau shipments through the month of April, export inspection data for the month of May, and expectations of competition from Brazil in the coming months. With no supply or use changes for 2023/24, ending stocks are raised 35 million bushels. The season-average farm price received by producers is unchanged at \$4.80 per bushel.

Global coarse grain production for 2023/24 is forecast 3.8 million tons higher to 1,513.3 million. This month's foreign coarse grain outlook is for larger production, trade, and ending

stocks relative to last month. Corn production is raised for Ukraine, reflecting higher area based on data reported by the government. For 2022/23, corn production is lowered for Argentina but raised for Brazil. Foreign barley production for 2023/24 is slightly higher, reflecting increases for Ukraine, the EU, and Turkey that are partly offset by reductions for India and Iran.

Major global trade changes for 2023/24 include larger corn exports for Ukraine and increased imports for the EU. For 2022/23, corn exports are lowered for Argentina and the United States but raised for Ukraine, Brazil, and South Africa. Barley exports for 2023/24 are raised for the EU and Ukraine. Foreign corn ending stocks are virtually unchanged relative to last month, as increases for Paraguay and Zambia are offset by reductions for Mexico and South Africa. Global corn ending stocks, at 314.0 million tons, are up 1.1 million from last month.

RICE: The only revision this month to the U.S. 2023/24 rice outlook is a reduction in supplies due to smaller beginning stocks. Total supplies are projected at 258.3 million cwt, down 1.0 million from last month on a reduction in long-grain beginning stocks. With no other changes to the balance sheet, total ending stocks are lowered 1.0 million cwt to 30.3 million. The 2023/24 season-average farm rice price forecasts are unchanged at \$15.00 per cwt for long grain, \$30.00 per cwt for California medium- and short-grain, and \$16.50 per cwt for Other States medium- and short-grain. All of the price forecasts are reductions from 2022/23.

Supplies, consumption, and ending stocks are increased for the 2023/24 global outlook, while trade is unchanged. The third Advanced Estimate from the Government of India increases production 4.0 million tons to 136.0 million for 2022/23. India's larger production in 2022/23 leads to higher ending stocks and is the main reason global supplies increase for 2023/24, up 4.3 million tons to 694.0 million. Global 2023/24 production is unchanged from last month as an increase for India is offset by reductions for Thailand and Cambodia. Trade is unchanged at 55.8 million tons with an increase for India offset by a decrease for Thailand. Total use is increased 0.8 million tons to 523.8 million, mainly on an increase in use for India. Projected 2023/24 global ending stocks are increased 3.5 million tons to 170.2 million but remain below a year earlier.

OILSEEDS: This month's U.S. soybean supply and use projections for 2023/24 include higher beginning and ending stocks. Higher beginning stocks reflect reduced exports for 2022/23, down 15 million bushels to 2.0 billion based on lower-than-expected shipments in May and competition from South America. With increased supplies for 2023/24 and no use changes, soybean ending stocks are projected at 350 million bushels, up 15 million. The soybean price is forecast at \$12.10 per bushel, unchanged from last month.

The 2023/24 global soybean outlook includes higher beginning stocks, lower crush, and higher ending stocks. Higher beginning stocks for the United States and Brazil are partly offset by lower stocks for Argentina. The stock revisions reflect 2022/23 production changes for Brazil, up 1.0 million tons to 156.0 million, and Argentina, down 2.0 million to 25.0 million. Global crush for 2023/24 is lowered on lower crush for Argentina. Global 2023/24 ending stocks are increased 0.8 million tons to 123.3 million with higher stocks for the United States, Brazil, and the EU, which are partly offset by lower stocks for Argentina and Vietnam.

Other notable 2023/24 oilseed changes include higher rapeseed production for the EU that is partly offset by lower production for Australia. Malaysian palm oil production is reduced for 2022/23 based on lower-than-expected monthly production estimates for March and April.

SUGAR: Mexico production for 2022/23 is estimated at 5.230 million metric tons (MT), down 155,000 from last month on a low sugarcane yield below 60.0 MT/hectare (3.2 standard deviations below the preceding 9-year average) and sucrose recovery below 11.0 percent (0.9 standard deviations below). There are 10 factories operating as of May 27 and most are expected to end their season soon. Half of the supply reduction is expected to lower deliveries to the IMMEX re-export program to 272,500 MT, of which 247,500 is expected from domestic production and 25,000 from imports. At this point import data from Mexico show imports through March only at 10,867 MT while other countries reported exports to Mexico are at 25,772 MT. The current 25,000 MT estimate for imports is based on imports reported for 2021/22 but it should be noted that the preceding 5-year average was 50,742 MT with 82,287 MT supplied by non-USMCA countries in 2017/18. The other half of the supply reduction is expected to lower exports by 67,917 MT to 1.002 million and ending stocks by 9,583 MT to 879,523. CONADESUCUA reports exports not under license to the United States to date at 18,291 MT, implying that exports to the United States are down 77,921 from last month to 984,096 MT. Raw sugar with a polarity of less than 99.2 percent is estimated at about 74 percent of this amount (that is, 728,231 MT).

Mexico production for 2023/24 at 5.900 million MT is unchanged from last month. Deliveries for IMMEX are projected at 450,000 MT, a reduction of 50,000 from last month and close to the average level between 2017/18 and 2021/22. Exports are residually projected up 50,000 MT to 1.348 million. All exports are projected to go to the United States under license.

U.S. beet sugar production for 2022/23 is projected at 5.171 million short tons, raw value (STRV), an increase of 15,375 on higher sucrose recovery from sliced beets. Imports are projected at 3.380 million STRV, a decrease of 66,046 on a 91,046-STRV decline in sugar expected from Mexico partially offset by a 25,000-STRV increase in high-tier tariff imports. With no change in use, these changes flow through to a reduction in ending stocks by 50,671 STRV. The ending stocks-to-use ratio is estimated at 13.13 percent, down from 13.53 last month.

U.S. sugar supply for 2023/24 is projected lower than last month by 90,749 STRV on lower beginning stocks and production partially offset by an increase in imports. Beet sugar production is down by 11,468 STRV on a higher shrink projected by processors, and cane sugar is down by 87,032 STRV on processors' projections in Florida and Texas. Imports from Mexico are increased by 58,422 STRV. There has been no USDA announcement on the additional specialty sugar TRQ for 2023/24. There is no change in use and stocks are lowered by the change in supply to 1.353 million STRV for an ending stocks-to-use ratio of 10.56 percent, down from 11.26 percent last month.

LIVESTOCK, POULTRY, AND DAIRY: The total U.S. red meat and poultry production forecast for 2023 is reduced from last month as higher beef production is more than offset by lower pork and poultry production. Beef production is raised with higher expected steer and heifer, cow, and bull slaughter. Pork production is lowered slightly for the second quarter on a more rapid pace of slaughter but lower carcass weights. No changes were made to the outlying quarters; the *Quarterly Hogs and Pigs* report, to be released on June 29, will provide indications of supplies of hogs for slaughter in the outlying quarters as well as into early 2024. Broiler production is reduced on the pace of slaughter and recent hatchery data. Turkey production is reduced on recent hatchery data. The egg production forecast reflects first quarter data revisions. The beef production forecast for 2024 is raised slightly on higher expected placements in 2023; forecasts for all other species are unchanged.

No changes are made to beef trade for 2023 or 2024. Pork exports are raised for both 2023 and 2024 on demand strength. No change is made to the broiler export forecast but turkey exports are raised slightly for 2023.

The 2023 cattle price forecast is raised from last month on firm demand. The hog price for the second quarter is raised from last month on observed prices; no changes are made to price forecasts for the outlying quarters. Broiler, turkey, and egg prices are reduced on current price data. For 2024, strength in cattle prices is carried forward from 2023; no changes are made to prices for hogs, broilers, turkeys, or eggs.

Milk production for 2023 is forecast lower than last month on slower growth in milk-per-cow than previously expected. Milk production for 2024 is unchanged from last month.

For 2023, commercial exports are lowered on both fat and skim-solids bases. Fat basis exports are lowered on recent data and primarily lower projections for butter. Skim-solids basis exports are lowered on recent data and as weaker whey and lactose shipments are expected to more than offset higher exports of nonfat/skim milk powders. For 2024, exports are unchanged on a fat basis but are lowered on a skim-solids basis. Imports for 2023 on a fat basis are raised on stronger expected demand for butter partly offset by weaker cheese imports. Imports on a skim-solids basis are lowered primarily on lower projected milk protein concentrate imports. Import forecasts for 2024 are unchanged.

For 2023, butter and nonfat dry milk (NDM) price forecasts are raised from the previous month on recent price strength and anticipated demand, while cheese and whey price forecasts are lowered. With the changes in product prices, the Class III price is lowered, and the Class IV price is raised. The all milk price forecast is lowered to \$19.95 per cwt.

For 2024, prices are reduced for cheese and whey but raised for NDM. Butter prices are unchanged from the previous month. The Class III price is forecast lower, while a higher Class IV price is expected. The all milk price forecast is lowered to \$19.65 per cwt.

COTTON: The 2023/24 U.S. cotton projections compared to last month show lower beginning stocks, but higher production, exports, and ending stocks. Projected abandonment in the Southwest has been reduced due to recent favorable rainfall, resulting in a production increase of 1.0 million bales to 16.5 million. Overall U.S. abandonment is now projected at 16 percent, which would be less than half its 2022/23 level, and close to the long run average. Exports are 500,000 bales higher, at 14.0 million, as both projected U.S. supplies and world trade are higher this month. The 2023/24 season average upland farm price is down 1 cent from the May forecast, at 77 cents per pound, and ending stocks are 200,000 bales higher, at 3.5 million. Revisions to the 2022/23 U.S. cotton balance sheet include a 100,000-bale reduction in domestic mill use based on lagging spinning activity to date, and a 400,000-bale increase in exports based on strong sales and shipment activity to date. Ending stocks for 2022/23 are now projected 300,000 bales lower than in May.

In the global 2023/24 cotton balance sheet, higher beginning stocks and production more than offset an increase in consumption, and ending stocks are projected 515,000 bales higher than in May, at 92.8 million. The forecast for world cotton production is 1.0 million bales higher this month as larger crops in the United States and Pakistan offset a 500,000-bale reduction for China. Consumption is 765,000 bales higher with increases in Vietnam, Pakistan, Bangladesh, Indonesia, and Turkey. World trade is also projected higher, up

900,000 bales, led by increased U.S. exports and China imports. Beginning stocks are 254,000 bales higher as the consumption prospects for 2022/23 continue to decline, down 538,000 bales from the May forecast. The 2022/23 forecast for world production is virtually unchanged as a 740,000-bale decline for West Africa's Franc Zone is largely offset by increases for the crops in India and Brazil.

Approved by the Secretary of Agriculture and by the Chairman of the World Agricultural Outlook Board, Mark Jekanowski, (202) 720-6030. This report was prepared by the Interagency Commodity Estimates Committees.

APPROVED BY:

ROBERT BONNIE

Note: Totals may not add due to rounding. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of ending stocks by type (in mil. cwt): 2019/20-1.0; 2020/21-2.5; 2021/22-2.0. 3/ Residual includes unreported use, processing losses, and estimating errors. Use by type may not add to total rice use because of the difference in breakens between beginning and ending stocks. 4/ Includes rough rice and milled rice exports. Milled rice exports are converted to an equivalent rough basis. 5/ Expressed as a percent, i.e., the total quantity of whole kernel and broken rice produced divided by the quantity of rough rice milled. 6/ Marketing-year weighted average price received by farmers. 7/ Includes imports. 8/ Exports by type of rice are estimated. 9/ The California medium/short-grain season-average farm price (SAFP) largely reflects rice that is marketed through price pools in California. The pool price is not final until all the rice in the pool is marketed for the crop year. Therefore, SAFP forecasts based on the average of NASS monthly prices and the final price may differ. 10/ Marketing year beginning October 1. * Planted acres reported in March 31, 2023, "Prospective Plantings." Harvested acres are estimated using long run harvested-to-planted ratios by rice class. Projected yield is based on by class trend analysis.

1/ Fiscal years beginning Oct 1. Data and projections correspond to category components from "Sweetener Market Data" (SMD). 2/ Production projections for 2022/23 and 2023/24 are based on Crop Production and/or processor projections/industry data and/or sugar ICEC analysis where appropriate. 3/ For 2022/23, WTO raw sugar TRQ shortfall (132) and for 2023/24 (94). 4/ Composed of sugar under the re-export and polyhydric alcohol programs. 5/ Transfers accompanying deliveries for sugar-containing products to be exported (SCP) and polyhydric alcohol manufacture (POLY), and deliveries for livestock feed and ethanol. Total refiner license transfers for SCP and POLY inclusive of WASDE-reported deliveries: 2021/22 -- 303; estimated 2022/23 -- 299; projected 2023/24 -- 291

Note: Reliability calculations at end of report. 1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Reflects the difference between the previous season's supply less total use and ending stocks. 3/ Cents per pound for upland cotton. *Planted area as reported in March 31, 2023 Prospective Plantings. Yield based on 5-year average yields by region. Harvested area based on 10-year average abandonment by region, with the Southwest adjusted to reflect conditions to date. Projected abandonment in the Southwest is reduced from 35 percent in May to 25 percent in June due to recent favorable precipitation.

Dry Whey	0.5744	0.6057	0.395	0.370	0.370	0.360
<i>Dollars Per Pound</i>						
Milk Prices 2/						
Class III	17.08	21.96	17.75	16.70	17.50	17.00
Class IV	16.09	24.47	18.30	18.35	17.35	17.45
All Milk 3/	18.53	25.34	20.50	19.95	19.90	19.65
<i>Dollars Per Cwt</i>						

All prices are January-December averages. 1/ Simple average of monthly prices calculated by AMS from weekly average dairy product prices for class price computations. 2/ Annual Class III and Class IV prices are the simple averages of monthly minimum Federal order milk prices paid by regulated plants for milk used in the respective classes. All milk price is the simple average of monthly prices received by farmers for milk at average test. 3/ Does not reflect any deductions from producers as authorized by legislation.

Reliability of June Projections 1/

Note: Tables on pages 35-37 present a record of the June projection and the final Estimate. Using world wheat production as an example, the "root mean square error" means that chances are 2 out of 3 that the current forecast will not be above or below the final estimate by more than 3 percent. Chances are 9 out of 10 (90% confidence level) that the difference will not exceed 5 percent. The average difference between the June projection and the final estimate is 16 million tons, ranging from 0.4 million to 32.2 million tons. The June projection has been below the estimate 26 times and above 16 times.

1/ See pages 35 and 36 for record of reliability for U.S. wheat, rice, soybeans, and cotton. Marketing years 1981/82 through 2022/23 for grains, soybeans, and cotton. Final for grains, soybeans, and cotton is defined as the first November estimate following the marketing year for 1981/82 through 2022/23. Calendar years 1994 through 2022 for meats, eggs, and milk. Final for animal products is defined as the latest annual production estimate published by NASS for 1994-2022.

Related USDA Reports

The *WASDE* report incorporates information from a number of statistical reports published by USDA and other government agencies. In turn, the *WASDE* report provides a framework for more detailed reports issued by USDA's Economic Research Service and Foreign Agricultural Service. For more information on how the *WASDE* report is prepared, go to: <http://www.usda.gov/oce/commodity/wasde>.

Supply and Demand Database

The Foreign Agricultural Service publishes Production, Supply, and Demand Online, a comprehensive database of supply and demand balances by commodity for 190 countries and regions at <https://apps.fas.usda.gov/psdonline/app/index.html>. Data for grains, oilseeds, and cotton are updated monthly and data for other commodities are updated less frequently.

Foreign Production Assessments

Preliminary foreign production assessments and satellite imagery analysis used to prepare the *WASDE* report are provided by the International Production Assessment Division (IPAD) of the Foreign Agricultural Service. IPAD is located at <https://ipad.fas.usda.gov/>.

Metric Conversion Factors

1 Hectare = 2.4710 Acres

World Agricultural Supply and Demand Estimates

WASDE-637 – June 9, 2023

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410 or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.
